**Harmful if swallowed. Avoid contact with skin, clothing or eyes.
In case of contact, rinse and wash with water for 15 minutes.**

OrganicGro™ substantially increases soil cation exchange capacity (CEC) and buffering capacity which results in greater nutrient availability and absorption. OrganicGro will hold nutrients for plant absorption and compounds for better growth. When making foliar or soil applications mix OrganicGro with water or liquid fertilizer. This product can be applied with or without fertilizer to enhance soil profile and increase the CEC of the soil. OrganicGro works especially well in sandy soil conditions and clay soils with low CEC.

Soil Application: Apply 1-8 quarts per acre depending on the agronomic needs and the soil structure. Make the application every month until the soil CEC has changed to targeted or desired levels. It is best applied at the critical growing stages of the plant, flowering, vegetative growth or fruit development.

For Foliar Application: During plant growth and development apply 16-32 oz. per acre of OrganicGro along with foliar fertilizers to improve the biological activity of fertilizers in the plant.

Nursery Production: Make an application of 32-64 oz. of OrganicGro per 100 gallons. This application should include Regal LiquiGreen™ products, Multigreen® and RegalCrown® to obtain the best plant growth and development.

OrganicGro is compatible with fungicides, herbicides, liquid fertilizers, insecticides and growth regulators in turf and nursery crops.

Pounds per gallon: 10.1 lbs/gal.

Consult a Regal Chemical representative for specific rates and needs for your soil type.
