

LIQUICAL™

FERTILIZER FOR HEALTHIER PLANTS.

0-0-0 (Ca)

Calcium 10%

Derived from Calcium Acetate

General Recommendations

For use in a balanced fertility program for turf, landscapes and nursery crops that require calcium.

Turf: Golf, commercial, sod, residential or hydroseeding

Use 4-6 ounces of LiquiCal™ per 1000 sq. ft. per application to actively growing turf. Two applications are recommended. If deficiencies occur, more frequent applications are needed. Make an application to greens or tees just prior to heavy play or tournament. A minimum of one (1) gallon of water per 1000 sq. ft. is recommended for best coverage. More if desired.

Ornamental or Nursery crops:

Use 2-4 pints of LiquiCal per 100 gallons of water. Cover foliage until runoff or through coverage. LiquiCal may be used for bedding plants, container grown or field grown plants.

Soil Application:

Make an application of 1-2 gallons per acre. Make a preplant application before seeding, sodding or transplanting of annuals, perennials or nursery crops.

USE A MINIMUM OF 20 GALLONS OF WATER PER ACRE WITH GROUND SPRAY EQUIPMENT.

For best results follow soil test and tissue analysis recommendations.

Mannitol Chelated Calcium

For prevention and correction of Calcium deficiencies

Contains penetrants and translocation aids

Does not Contain Chlorides

Freezing Temperature 32°F

Weight Per Gallon 12.2 lbs.
